

# Getting the best out of your business, with HPE Cloud Managed Servers.

At Hewlett Packard Enterprise, we believe that IT should be simple and available to anyone, anywhere.

We have a long-standing relationship with Zynstra, whose software is built on our HPE ProLiant Gen 9 servers to deliver enterprise-class hybrid IT for the SMB.

Our Cloud Managed Servers provide a cost-effective approach to IT, so SMBs can experience the benefits that have previously only been available to large enterprises. Here's an example case study so you can see how we've been helping out other businesses.

Cube Real Estate is a London-based property company and asset manager focused on providing the best quality workspace for their tenants across the UK.

**Delivery partner:**

BTA

**Business driver:**

IT Refresh

**Business profile**

Cube Real Estate is a real estate investment company delivering above-market returns for itself and its co-investors by applying knowledge, experience and imagination to asset selection and management.

Cube applies creativity to unlocking the potential of assets that are often overlooked by mainstream investors, to produce superior returns in the short to medium-term.

**Case study**

Cube's IT infrastructure was approaching end-of-life. Mike Benton, a Director of Cube Real Estate had requested his preferred IT partner, BTA Ltd, to provide a quote for their IT refresh.

Commenting on their requirements, Mike Benton said "We were looking to replace our infrastructure, but the up-front costs of traditional IT solutions would have been an unnecessary drain on our cash reserves. We pay for our staff and buildings monthly, we lease our cars, but our IT was the one area of our business that needed a new approach – so we tasked BTA with coming up with an OPEX-based solution."

Easynet Hybrid Cloud IT powered by Zynstra, delivers a cloud like experience but in the customer's offices and under their control.

## Why Zynstra

### No more IT refresh

Cube's IT infrastructure was approaching end-of-life and they were looking to take advantage of the latest technology to future proof the business. With Zynstra's Cloud Managed Server they know their IT is kept current and up-to-date, including both the hardware and software deployed. They shouldn't need to worry about an end-of-life IT infrastructure again. It just works.

### Predictable monthly costs

The up-front costs of traditional IT solutions would have been an unnecessary drain on the company's cash reserves. So Cube asked their partner to find them an OPEX-based solution. Cube are now able to predict their IT costs on a monthly basis and the solution is more cost effective. It comes pre-installed and pre-integrated, and works out 20-30% cheaper than building a like-for-like solution from the component parts.

### The best of on-premises & cloud capabilities

Cube were looking for a way to benefit from cloud services whilst retaining on-premise control. Zynstra's Cloud Managed Server acts as a secure gateway to the Internet, providing virtualized firewalls, anti-virus, anti-malware and intrusion detection for the appliance and secure remote access for remote users via VPN. It also offers regular, secure backups and high-availability providing complete peace of mind.

### Complete peace of mind

The Appliance delivers file and print services to the London and remote users. Regular backups of user configuration and files are made automatically to redundant disks on the appliance. Every night the backup files are encrypted and transmitted to an off-site cloud storage location. What's more, a cloud-based disaster recovery solution is included as standard, something that's often beyond the reach of smaller businesses.

## About Zynstra

Zynstra is a software company, committed to delivering highly affordable enterprise grade IT which is simple to buy, deploy and use. Our unique solution delivers hybrid IT as a service, enabling customers to choose the right blend of local and cloud IT to scale with their business, without the need for expensive future upgrades, all managed and kept up to date via the cloud. Zynstra are the winners of the 2015 IT Industry Awards for Infrastructure Innovation of the Year.

Zynstra is backed by Octopus Ventures, one of the United Kingdom's leading investors in fast-growth companies that can scale explosively to create, transform or dominate an industry.
